

PRESSURE CONTROL VALVE

LUN 5666-8

The pressure control valve is a device in OBIGGS circuit, which maintains a constant outlet pressure of air required for correct function of the system

Technical Data

Working medium	conditioned air
Maximum working temperature of air	+95 °C
Maximum inlet working pressure	1.4 MPa
Outlet overpressure with inlet pressure 0.3 to 1.4 MPa, Air temperature 20 ° C and flow 0 to 11 s ⁻¹	44 to 61 kPa
Working environment	-55°C to +85 °C
Weight	max. 1.1 kg

Dimensions (mm)
